

# Arimaa

## Arimaa, the Game of **¿Real Intelligence?**

Nicolás A. Barriga Richards  
nbarriga@inf.utfsm.cl

# Arimaa: The Game of Real Intelligence

- ▶ Easy rules for humans to learn
- ▶ Computer ineptitude
  - ▶ Large branching factor
    - ▶ Multi-step moves
  - ▶ Variable opening position
  - ▶ Finals with many pieces left
  - ▶ Positional(arimaa) vs Materialistic(chess) evaluation

# Rules

- ▶ Variable opening position
- ▶ 1 move = 4 steps
- ▶ Push move
- ▶ Pull move
- ▶ Capture
- ▶ Immobilization
- ▶ Goal

# The Challenge

- ▶ Program that can defeat the top human players
- ▶ Before 2020
- ▶ Reward of US\$10.000

# The Championship

- ▶ Computer championship(US\$500 & US\$200)
  - ▶ Floating triple elimination
  - ▶ 40 days playing before wcc
- ▶ Human championship(US\$500 & US\$200)
  - ▶ Floating double elimination
- ▶ Challenge match(US\$10.000)
  - ▶ 3 3-game matches against top three humans

# Developing a Bot

## The Environment

- ▶ Simple interface
- ▶ gamestate file
- ▶ position file
- ▶ move file
- ▶ move output
- ▶ Bot kit (on-line and off-line)

# Input files

- ▶ `running/matchGamestatexxxxx`
- ▶ `running/matchMovexxxxxx`
- ▶ `running/matchPosxxxxxx`

# Output

- ▶ {Piece}{Pos}{Direction}
- ▶ Ra1n Me2s de3s de4x Ef2e

# Matchoffline script

- ▶ `match test1 test2`
- ▶ `test1 ./getMove getMove -d 4`
- ▶ `test2 ./getMove getMove -d 4`

# Developing a Bot

## The Search

- ▶ Variations on minimax
  - ▶ Alphabeta
  - ▶ MTD(f) (zerowindow)
  - ▶ Killer heuristic
  - ▶ Nullmove Heuristic
  - ▶ Transposition tables
  - ▶ Search extensions
- ▶ Horizon effect

# Alpha-Beta Search

```
evaluate (node, alpha, beta)
  if node is a leaf
    return the heuristic value of node
  if node is a minimizing node
    for each child of node
      beta = min (beta, evaluate (child, alpha, beta))
      if beta <= alpha
        return alpha
    return beta
  if node is a maximizing node
    for each child of node
      alpha = max (alpha, evaluate (child, alpha, beta))
      if beta <= alpha
        return beta
  return alpha
```

# Developing a Bot

## The Evaluation

- ▶ Feature extraction
  - ▶ Hand made
- ▶ Types
  - ▶ Linear Functions
  - ▶ Neural Networks(experimental)
- ▶ Tuning
  - ▶ Hand tuned
  - ▶ Genetic algorithms (experimental)

# Developing a Bot

## Possible Improvements

- ▶ Search via coevolutionary GA
- ▶ Train evaluation function via TD(Lambda)
- ▶ Automatic characteristic extraction
- ▶ Montecarlo Search

# Bitboard handling and other technical stuff
